INSIDER RISK
ASSESSMENT

Organisations of all sizes can baseline the maturity of their insider risk posture. The most accessible framework to do so is the **Personnel Security Maturity Assessment** from the National Protective Security Authority (NPSA).

This self-assessment tool helps organisations understand their current posture and identify practical improvements. We offer tailored support with:

- **Guided implementation:** We'll help you understand the tool and guide you through conducting the assessment

- **Expert Insider Risk input:** Our team brings real-world experience to help you beyond the theory

- **Tangible costed mitigations:** We'll provide you with a roadmap of actionable, costed measure to improve your maturity

PERSONNEL SECURITY MATURITY ASSESSMENT

National Protective Security Authority

Identify access
List roles with access to sensitive assets

Assess threats
Evaluate insider risks and current controls.

Prioritise risks
Rank risks by likelihood and impact.

Plan mitigations
Develop proportionate actions to reduce risk.

4-6 WEEKS	SENIOR RISK OWNER	ALL LEVELS

INSIDER RISK SERVICES

- Vetting and selection
- Behavioural Design
- Monitoring advice
- Personnel Security
- Behaviours and Culture
- Malicious & accidental actors

ADVISORY

Strategic and tactical advice from our broad range of experts with deep knowledge. We deliver both one-off and retained advice
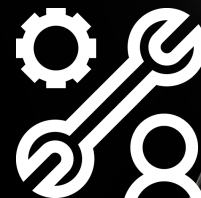

ASSESSMENTS

Using NPSA's framework or our own methodology we can baseline or assess an organisation's insider risk posture

WORKSHOPS/EXERCISES

Often the best way to increase engagement and awareness are workshop and exercises designed to bring alive insider risks and mitigations

PROGRAMMES

Building insider risk programmes to fit any organisation so they can continue to grow their business with confidence

BEHAVIOURAL DESIGN
WORKSHOP

WHAT IS BEHAVIOURAL DESIGN?

Changing a small number of key security behaviours in your organisation can act as a fast track to changing wider security culture. Behavioural design

- **Uses evidence-based methods** to shape secure behaviours through smart systems, spaces, and policies.

- **Challenges directive security approaches,** focusing on enablement over enforcement to drive real behaviour change.

- **Draws on nudge theory to** reduce violations by designing environments that support positive security actions

THE WORKSHOP

A focussed workshop for security teams, during which we will:

- **Build foundational knowledge**: A half-day session introduces SMEs to behavioural design principles and practical applications in security.

- **Diagnose key challenges**: On-site engagement identifies problematic behaviours and contributing factors across policies, systems, and culture.

- **Co-design solutions**: A full-day workshop helps SMEs analyse root causes and develop targeted, system-level behaviour change interventions.
